

WILLIAM STECK

SOFTWARE ENGINEER

Projects

SpotLot

Mobile application that allows users to rent out their empty parking spots at their homes, allowing other users to reserve those parking spots straight from their phones.

- Developed all front end components for application using React Native
- Utilized React Navigation to create a navigation drawer and navigate between components
- Created and implemented patch requests for user data

Shareaoke

Music sharing application with lyrics integration for organizing karaoke events with friends.

- Utilized Spotify's API to fetch and play songs
- Implemented React Router for dynamic page routes
- Stylized application utilizing Bootstrap

Social Club

Social event creation application.

- Refactored single page application to use React Router
- Integrated Twilio to text links to newly created events

Professional Experience

NOCCI

Event Marketer

- Maintained and updated database of current and potential clients
- Recruited vendors and sponsors for events
